Cape Town is bracing for “Day Zero” – the day it cuts off running water for 4 million people

The South African megacity has been struck by a historic drought, and now it's running out of water.

Facts are few, opinions plenty... on drought severity again

Posted January 22, 2018 by [Piotr Wolski](#) & filed under [CSAG blog](#), [Frontpage](#).

Yes, Day Zero will be dramatic. But will we have to brave any charismatic african wildlife to get to the little water we need? Heck, no. So off you go – from the start we are already better off than millions. We are also better off than [50% of urban population in Africa](#) (which roughly amounts to 240 million people) who have to fetch their water in buckets for years if not throughout their lifes, not just for a couple of weeks (Ok, perhaps months) like we might have to do.

So just calm down!

Let's realize a couple of things – foremostly, that Day Zero is not threatening our lives. It's threatening our lifestyles.

Nobody has as yet died of sponge-bathing or smelly clothes, so we will not either. Unless suburban capetonians have evolved to be more fragile than the Princes on the Pea, that is.

Day Zero pushed back to July 9

Listeriosis: Crisis as death toll rises

🏠 BHEKI C. SIMELANE 📍 SOUTH AFRICA 21 FEB 2018 12:06 (SOUTH AFRICA)

🗨️ Reactions

On Monday the Gauteng Department of Environmental Affairs kicked off an awareness campaign on potentially fatal listeriosis. But the death toll is rising as more stringent measures are yet to be implemented. By BHEKI C SIMELANE.

PRO/AH/EDR> Listeriosis - South Africa (06): fatal, more cases

The country's listeriosis outbreak shows no sign of slowing down. In the last week alone, 57 people died from the food-borne disease, bringing the death toll to over 160. The source of the outbreak remains unknown.

The manner in which food is prepared in businesses and in homes has been under the spotlight since the outbreak of the disease in December 2017. Fruit and vegetables must be washed well and meat cooked thoroughly.

In the midst of the largest listeriosis outbreak to date in the world, the National Institute for Communicable Diseases (NICD) is asking victims in South Africa to list everything they can remember eating in the past month with the hopes of identifying a source.

Of the 872 confirmed cases, 164 people have died, 43 percent of whom were babies less than a month old.

"Given the scale of our mystery outbreak, it has led to what one delegate termed 'listeria hysteria', at a listeriosis workshop hosted by the South African Association of Food Science and Technology (SAAFoST) in Johannesburg on Wednesday [14 Feb 2018]," according to a story from The Times in Johannesburg.

Concern at spike in rabies cases in Gauteng

GAUTENG / 28 SEPTEMBER 2016, 06:26AM / VUYO MKIZE

A veterinarian prepares a dosage of rabies vaccine at the 2014 Taipei Pet Show in Taipei in this file photo taken July 11, 2014. Rabies experts on Thursday unveiled a blueprint for eliminating the pernicious disease, which usually is transmitted by bites from rabid dogs and kills tens of thousands of people a year, through a program of mass dog vaccinations in targeted regions. REUTERS/Pichi Chuang/Files (TAIWAN - Tags: HEALTH SCIENCE TECHNOLOGY)

Johannesburg - This year alone, Gauteng has had 38 cases of rabies confirmed in animals, with two cases of human exposure that were nipped to prevent the fatal effects of the disease.

Girl, 14, dies from rabies in Eastern Cape

EASTERN CAPE / 16 FEBRUARY 2018, 3:55PM / RAAHIL SAIN

File picture.

Port Elizabeth - The Eastern Cape Department of Health on Friday urged the public to treat all dog bites as harmful and if bitten, to seek medical assistance immediately, this after a 14-year-old girl died of rabies.

PEP depends on the type of contact with the suspected rabid animal (see table).

Table: Categories of contact and recommended post-exposure prophylaxis (PEP)

Categories of contact with suspect rabid animal

Category I – touching or feeding animals, licks on intact skin

Category II – nibbling of uncovered skin, minor scratches or abrasions without bleeding

Category III – single or multiple transdermal bites or scratches, licks on broken skin; contamination of mucous membrane with saliva from licks, contacts with bats.

Post-exposure prophylaxis measures

None

Immediate vaccination and local treatment of the wound

Immediate vaccination and administration of rabies immunoglobulin; local treatment of the wound

1676 PEOPLE LOST THEIR LIVES ON THE ROADS THIS FESTIVE SEASON!

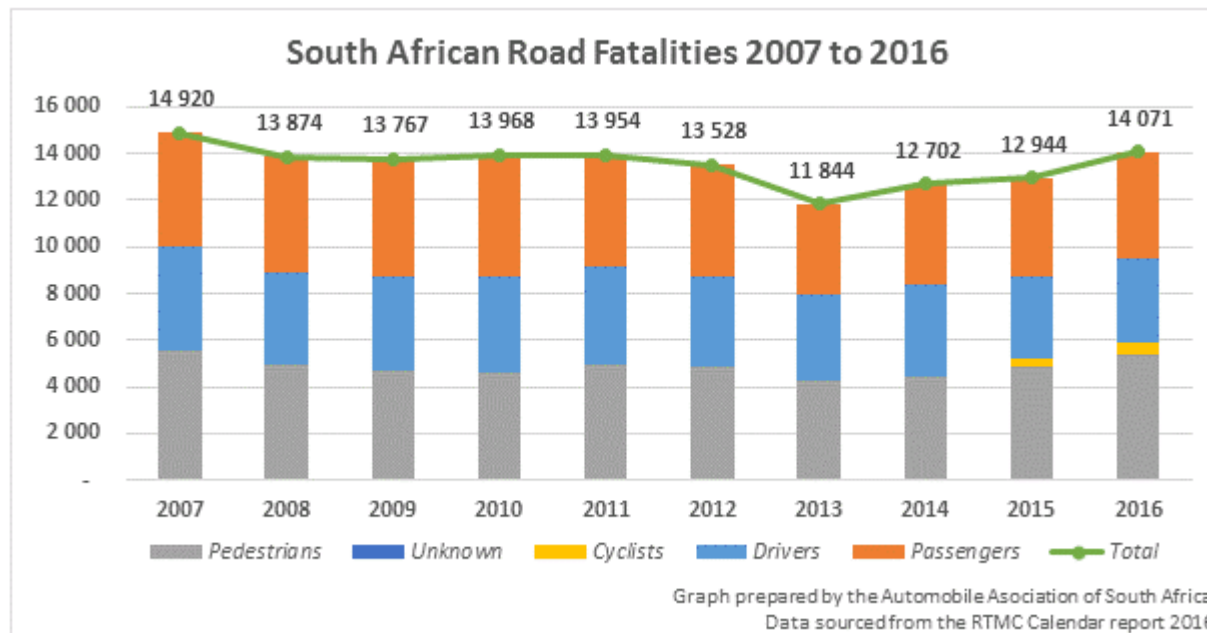

The Road Traffic Management Corporation announced that road accidents have declined since last year. We break down the December stats...

COMPAREGURU | 30 JAN 2018

The festive season has eventually come to a close and most of us have found ourselves back to the daily grind.

South Africa's shocking road death numbers at highest level in 10 years

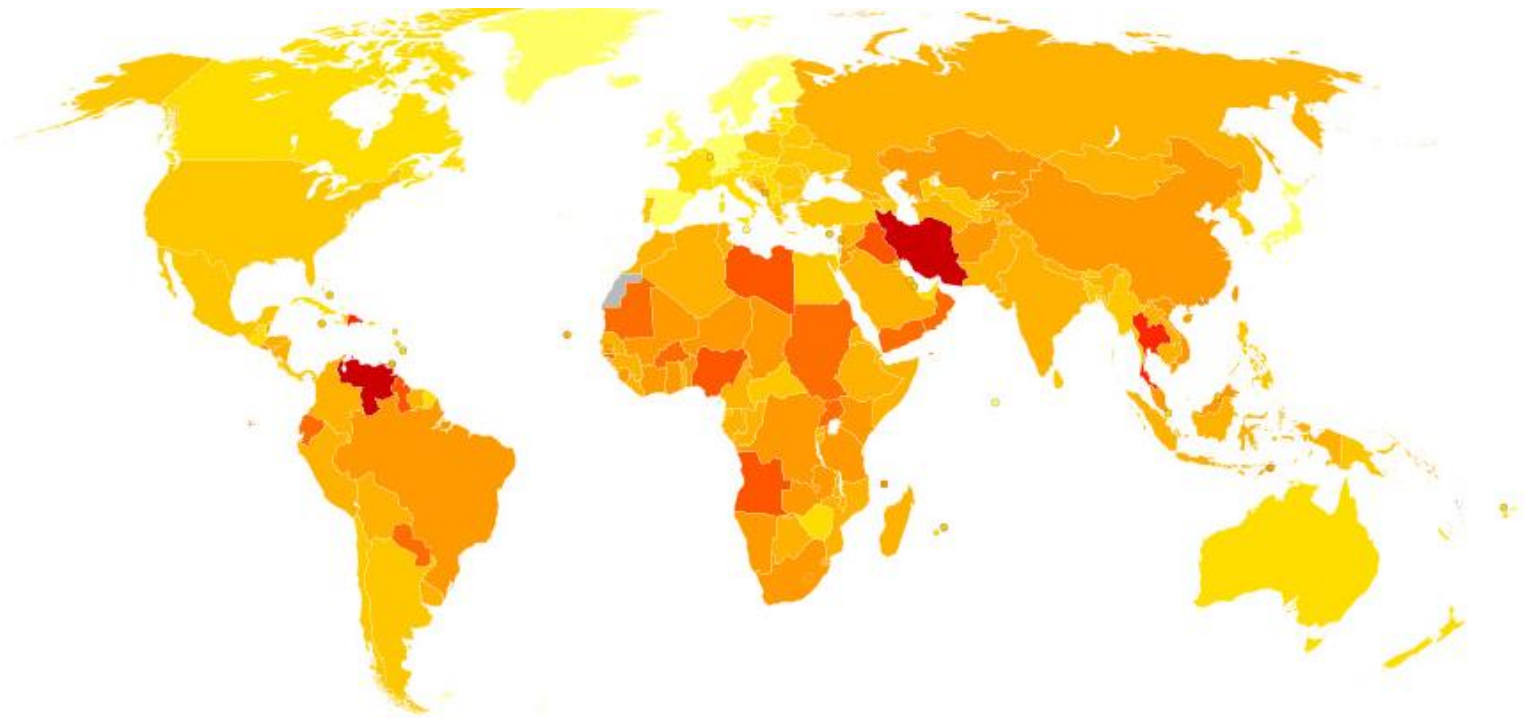

Colnef • 10 months ago

No one should be surprised. Like the country, the roads are out of control. When you see drivers risking their lives, those of their passengers and other road users by overtaking on a blind corner to advance one position on the road when a passing lane is 200m away you know you have seen madness in action. We can say with certainty driving in this country has been decolonized.

UNFÄLLE AUF DEUTSCHEN STRASSEN

2016 wieder weniger Verkehrstote

VON PETER-PHILIPP SCHMITT - AKTUALISIERT AM 06.07.2017 - 15:55

Die Zahl der Unfälle nimmt zu, die der Verkehrstoten ab. So wenige Menschen wie im vergangenen Jahr sind seit 1953 nicht im Straßenverkehr gestorben.
